ENGINEERING SPECIFICATIONS

I. EVAPORATORS GENERAL

- **Coil** - Ammonia - FL and RB: To be constructed with 1" OD x .065" wall seamless drawn Aluminum tubing.
Ammonia - RT and DX: To be constructed with 5/8" OD x .049" seamless drawn Aluminum tubing.
Halocarbon - FL and RB: To be constructed of 1" x .035" wall seamless, Copper tubing.
Halocarbon - RT and DX: To be constructed with 5/8" x .025" seamless, Copper tubing.
**Glycol: To be constructed with 5/8" x .025" seamless, Copper tubing.
**Consult Factory for Performance Ratings.
- **Fins** - Shall be aluminum 1100 alloy. Fins shall be continuous flat plate type with full length, self-spacing collars. Tubes to be staggered in direction of airflow, expanded into fin collars to form a tight mechanical bond between tube and fin.
- **Headers** - Ammonia: Shall be made of schedule 40 (minimum) Aluminum pipe. All joints TIG welded.
Halocarbon: Shall be made of Type "L" Copper. All joints brazed with 5% Silver Solder.
- **Coil Connections** - Ammonia - Shall be aluminum flange unions. (Dielectric bushing and washers which will electrically isolate aluminum coil flanges from the supplied mating steel socket weld flanges, are optional.)
Halocarbon - Copper "sweat".
- **Ammonia Coils** - Shall be tested for leaks after welding at 500 psig (35 bar) with dry air under water.
Halocarbon coils - Shall be tested for leaks after welding at 350 psig (25 bar) with dry air under water.
- **Fans & Motors** - Propeller fans constructed of Aluminum blades on steel spiders. 20" (508mm) and 24" (610mm) diameter fans driven at 1140/950 RPM @ 60/50 Hz. 30" (762mm) diameter fans driven at 850/950 RPM @ 60/50 Hz. Fan motors to be TEAO severe duty. Motors have ball bearings and internal thermal protection, Single Phase and Three Phase.
- **Cabinet** - Standard construction is of 16 Ga. Galvanized Steel, with Aluminum drainpans and access panels. (Special materials are also available. See Optional Features)
- **Drainpans** - Drainpan shall be insulated and protected by a galvanized steel cover.
Note: **Insulated Drain Pans** are required by the USDA in meat processing facilities.

II. CIRCUITING

- **Liquid Overfeed Circuiting** - RB (Recirc. Bottom Feed) coils are circuited parallel-flow to optimize circuit feeding and coil performance at all load conditions. RT (Recirc. Top Feed) coils must be circuited counter-flow because of vertical-up airflow. Liquid overfeed orifices shall be used at each circuit entrance, sized for 5 psi pressure drop to insure good liquid distribution.
- **Flooded Circuiting** - FL (Gravity Flooded) coils are circuited parallel flow to optimize circuit feeding and coil performance at all load conditions.
- **Direct Expansion Circuiting** - DX coils are circuited counterflow to produce superheated refrigerant on last pass. (Required for thermostatic expansion valve operation).

III. DEFROST

- **Hot Gas Defrost** - Coils arranged for hot gas defrosting shall be "coil only" defrost. (Heated drainpan is available as an option - see Optional Features).
- **Water Defrost** - Coil to be arranged for water defrosting. Water shall be distributed evenly over the entire coil surface (excluding return bends and headers) by a spray tree, mounted above the fins. Piping is external for easy access to nozzles.

IV. APPROVED VENDOR

- **Approved Vendor** - Colmac Coil Manufacturing, Inc. **Model:** AR_____

V. ORDERING INFORMATION

- **Please Specify**

1. Complete model number.
2. Saturated suction temperature.
3. Room temperature.
4. Overfeed ratio (if pump recirculatedd).
5. Options or special features.

OPTIONAL FEATURES

(Consult Factory for more information)

- Dual circuiting for capacity control.
- Corrosion resistant fin coatings.
- Variable fin spacing for heavy frost conditions. First row on 4 row coils and first 2 rows on 6 and 8 row coils are 2 FPI, remaining rows of coil are 4 FPI.
- Stainless steel or all Aluminum cabinet.
- Dielectric steel flanges & bolts.
- Electric Defrost.
- Heated Drainpan, Hot Gas Defrost.
- Fan Speed Controls, Single and three phase

APPLICATION GUIDELINES

AR Unit Coolers are suitable for produce storage areas, populated cold-storage work areas, and other applications where a low profile and low air-velocities are required.

Fan Motor Heat - Is not included in the ratings and should be added to the room cooling load as follows:

HP	English		SI	
	Btu / (HP*hr)		kW	Watts / kW
1/8 to 1/2	4250		0.1 to 0.4	1670
3/4 to 3	3700		0.6 to 2.2	1454
5 to 20	2950		3.7 to 14.9	1159

Low Coil Face Velocity - 600 FPM, or less - Allows AR units to operate with a wet surface without moisture carry-over.

High TD's are recommended when dirty air has the potential for coating the fins with debris (loading docks, etc.), and when low humidity is desired.

- Frosted fins are "cleaned" during defrost cycle.
- High TD's ensure better performance with dirty fins in no-frost conditions.
- Colder fins condense more moisture.

Low TD's - Approx. 10°F (6°C) - are recommended for high humidity applications such as Carcass Chillers and Wet Produce storage.

- Carcass Chilling requires a higher initial refrigeration capacity. Removing body heat raises initial TD during pulldown. Size liquid lines for the maximum load anticipated.

Units should be located so that the air discharges parallel to beams whenever possible.

Recommended Coil Circuiting for Ammonia

RB - Pump Recirculated, Bottom Feed - Is recommended for all hot gas defrost systems. The coil should always have hot gas fed at the top (suction) to ensure good liquid and oil drainage during defrost.

RT - Pump Recirculated, Top Feed - Is recommended for all air and water defrost systems. Although not recommended, top Feed can also be used in hot gas defrost systems provided hot gas is fed into the liquid header at the top of the coil. Gas flowing through the liquid feed orifices will experience some pressure drop which may penalize defrost performance.

FL - Gravity Flooded, Bottom Feed - Is typically cost effective for small systems (4 evaporators or less), and is recommended when a variable load exists. May be used with Hot Gas or Water Defrost, provided the coil has hot gas fed into the suction header to ensure good liquid and oil drainage during defrost.

DX - Direct Expansion Feed - Should not be used when saturated suction temperature is 0°F (-18°C) or less. For best results, DX coils should be used with a minimum TD of 12 to 15°F (7 to 9°C)

- **Liquid Overfeed Systems** - Must provide liquid at 5 psi (35 kPa) above suction pressure and at a temperature not exceeding 30°F (17°C) above saturated suction temperature.
- **Water Defrost** - Defrost water must be provided to AR units at 5 psig pressure at rated flow rate.

Recommended Circuiting / Defrost Combinations

Circuiting	Defrost Configuration			
	Hot Gas	Water	Air	Electric
FLA / FLH	✓	✓	✓	N/R
RBA / RBH	✓	✓	✓	N/R
RTA / RTH	N/R	✓	✓	✓
DXA / DXH	✓	✓	✓	✓

Notes:

1. Lb/min x .00756 = kg/s
2. At 95°F (35°C) Liquid Temp, -30°F (-34°C) Suction Temp.
3. DX Liquid size to be determined at Factory.
4. Suction Sizes based on .5°F / 100ft (0.9°C / 100m)
5. Tons Refrigeration x 3.517 = kW.
6. * * Use Steel, SCH 40, IPS inches.

		3, 4	29 (735)		41 (1040)
	6	1, 2	33 1/4 (845)	"	45 1/4 (1150)
		3, 4	34 1/4 (870)		46 (1170)
	8	1, 2	38 1/2 (975)	"	50 1/2 (1280)
		3, 4	39 1/2 (1003)		51 1/4 (1300)

- Notes:
1. Minimum distance from ceiling:
Distance without deflector = Fan Diameter
Distance with deflector = 13 (330mm)
 2. Ammonia Header Connections are Aluminum Flange.
Halocarbon Header Connections are Copper ODS "sweat"

Table 10
Electrical Specifications

60 Hz			Single Phase 208-230V		Three Phase 208-230V/460V	
Model	HP	RPM	FLA	LRA	FLA	LRA
AR6	1/3	1140	2.0 - 1.8	7.0	1.7-1.6 / 0.8	7.5-7.2/3.6
AR9	1/2	1140	2.4 - 2.3	10.0	2.3-2.2 / 1.1	10.4-10.0/5
AR11	1/2	850	2.5 - 2.4	7.5	2.4-2.4 / 1.2	7.5/3.8

50 Hz			Single Phase 220-240V		Three Phase 200 / 400V	
Model	HP (Watts)	RPM	FLA	LRA	FLA	LRA
AR6	0.45 (338)	950	2.8 - 2.7	8.0	1.8 / 0.9	8.1/4.0
AR9	0.67 (500)	950	3.6 - 3.4	12.7	3.2 / 1.6	12.8/6.4
AR11	0.67 (500)	950	3.6 - 3.4	12.7	3.2 / 1.6	12.8/6.4

Notes: 1. Totally Enclosed, Air-Over (TEAO) Motors
2. Motors supplied with internal thermal overload protection.
